

COMPANY QUALITY POLICY

TECSYSTEM srl works to provide customers with an increasingly satisfying service and at the same time develop your business while maintaining a balanced relationship and harmonious between individuals and society (clients, employees, civil society, partners).

TECSYSTEM srl **declares** its intention to pursue this result by continuously improving its performance in terms of efficiency of the activities performed.

Our Vision

Giving security to the supply of electricity, the basis of daily life and the development of human work. Maintaining constant monitoring of the machines means continuously managing the electricity service, as well as ensuring the safety of the environment in which people live, work and move.

Our Mission

- Increase and facilitate the temperature control of the machines also through the digitalization of the relevant systems.
- Simplify and optimize the human maintenance and temperature monitoring on the equipment.
- Prevent machine downtime and monitor the functioning of the equipment in order to ensure the consistency of the energy supply service, a necessary condition for human security, especially in certain contexts.

In view of these conditions, TECSYSTEM undertakes to:

- *define clear and measurable goals at the beginning of each year*
- *periodically check the adequacy of its policy to the objectives identified by the management*
- *verify the results achieved and promote improvement actions*
- *comply with the regulations concerning the safety of personnel*
- *involve all relevant personnel, through an appropriate training and encouraging any initiative aimed at improving quality*
- *maintain constant attention to processes, in particular to those who they are simultaneously connected to the dimensions of quality, safety and the environment*
